Mobile Repair Team in demand

Engine repairs in both Europe and Africa are no problem for Danish company ScanTech

ScanTech's Mobile Repair Team is in a busy period right now. Recently they have been in Poland, the Czech Republic, Russia and Turkey and also as far away as Uganda in Africa. ScanTech is a Danish based aircraft maintenance facility specialized on HawkerBeechcraft aircraft and JT15, PT6 and PW100-series engines.

Experienced Service Center

Even though ScanTech's engine capabilities are requested more than usual it's not a new area of business for the company. ScanTech has been doing mobile repairs for many years on various areas. This means a lot of experience and know-how to draw on when servicing the customers. The company cooperates with different overhaul shops and aviation companies that need mobile and flexible assistance. This applies to maintenance on airframe as well as power plant. Among the collaborators is Pratt & Whitney Canada that has announced ScanTech as a Recognized Maintenance Facility and Engine Service Center. Ville Vaeisaenen from the P&WC Customer Service Center Europe says:

"Over the course of our long standing relationship, ScanTech has been a reliable partner for providing Mobile Repair at times when their availability was the right option to serve our customers. ScanTech's flexible support and quick response to P&WC CSC Europe requirements enhances our third-party assistance network providing MRT and line maintenance at P&WC quality standards."

Quick response time makes the difference

ScanTech's technicians have a long background in travelling out to meet the customer on site and perform the required work right there on the spot. Quick response time is one of ScanTech's core competences and is a result of the flat and informal organizational structure of the company.

The fast response time is of course used in many different types of work. But the engine area and the servicing of engine customers is a very important area of work.

"The cooperation with Pratt & Whitney Canada is definitely a stamp of approval of the work we perform and we do our best to live up to this every time we perform a MRT job", says Sales Manager Mads Jensen. "It is important to live up to the expectations from the customers and give them the attention and service they request", he explains.

More information can be obtained by contacting Sales Manager Mads Jensen on: +45 9678 0200 or at mje@scantech.aero. You can also visit www.scantech.aero.

Pratt & Whitney Canada, based in Longueuil, Quebec, is a world leader in the design, manufacture and service of aircraft engines powering business, general aviation and regional aircraft, and helicopters. The company also offers auxiliary power units and industrial gas turbines.
